

British Science Week 2019

British Science Week is an annual event which lasts for nine days, celebrating science and maths. It is a time for people of all ages to explore science through a range of experiments and investigations. The theme for British Science Week 2019 is Journeys. Young people are encouraged to think about the scientific journeys that have been made leading to discoveries and the journeys involved with everyday objects (e.g. electricity passing through wires, food exports etc).

Included in this KS1 pack are four experiments with step-by-step instructions detailing how to carry them out. There are also prompt cards to encourage the children to think scientifically.

KS1 children will require adult supervision at all times.
